Practical Ladder Logic Examples for S7-300

Example 1: Start/Stop Motor Control

This is a fundamental example demonstrating how to control a motor using start and stop buttons.

Objective: When pressing the start button, the motor runs; pressing stop stops the motor.

Ladder Logic Sequence:

- Inputs:

- `I0.0` - Start Button (NO)
- `I0.1` - Stop Button (NC)

- Outputs:

- `Q0.0` - Motor Control Coil

``plaintext

```
|---[ I0.1 ]---+---[ I0.0 ]---+------( Q0.0 )---|
```

```
| | | |
```

```
| | +--[ Seal-in Contact ]----- |
```

```
| | |
```

```
| +-----[ Q0.0 ]-----|
```

```
...
```

Explanation:

- The stop button (`I0.1`) is normally closed, so when pressed, it breaks the circuit.
- The start button (`I0.0`) is normally open; pressing it energizes `Q0.0`.
- The seal-in contact (also `Q0.0`) maintains the motor's run state after the start button is released.
- Pressing stop de-energizes `Q0.0`, stopping the motor.

Example 2: Conveyor Belt with Overload Protection

This example adds a safety feature to prevent motor damage.

Objective: The conveyor runs when start is pressed, but stops if overload is detected.

Components:

- `I0.0` - Start Button (NO)

```

```
| | |
```

```
| +-----[I0.2]-----|
```

```

```
| +---[Seal-in]-----|
```

```
||
```

```
| +--[T1 Q]-----+
```

```
||
```

```
+-----+
```

Timer T1:

- Preset: 300 seconds (5 minutes)
- When `Q0.0` is ON, T1 starts counting.
- When T1 timing completes, it resets `Q0.0`.

...

Operation:

- Turning on the switch energizes `Q0.0` and starts timer `T1`.

```

```
|---[Q0.0]-----+ +---(Q0.1)---|
```

```
| | | |
```

```

Question What is the maximum safe height for a ladder according to OSHA standards? **Answer** OSHA recommends that ladders should generally not be used at heights exceeding 4 feet for fixed ladders and 6 feet for portable ladders without proper fall protection. How should a ladder be positioned to ensure stability? A ladder should be placed on a firm, level surface, at the correct angle (1:4 ratio, approximately 75 degrees), and secured at the top or bottom to prevent slipping or falling. What is the importance of maintaining three points of contact while climbing a ladder? Maintaining three points of contact (two hands and one foot, or two feet and one hand) helps ensure stability and reduces the risk of falls. Can you carry tools while climbing a ladder? Tools should be carried in a tool belt or hoisted separately to prevent losing balance. Climbing with tools in hand can cause falls or injuries. What should you do if a ladder is damaged or defective? Do not use the ladder. Report it to your supervisor and tag it for repair or disposal to prevent accidents. Why is it important to inspect a ladder before each use? Regular inspections help identify defects such as cracks, loose rungs, or corrosion, preventing potential accidents caused by equipment failure. What types of footwear should be worn when using a ladder? Non-slip, sturdy footwear should be worn to ensure good grip and prevent slipping while climbing or working on a ladder. Is it safe to overreach while on a ladder? No, overreaching can cause the ladder to become unbalanced and lead to falls. Always keep your body centered and within the ladder's side rails. When should a ladder be secured or tied off? A ladder should be secured or tied off when working at significant heights, windy conditions, or on uneven surfaces to prevent slipping or tipping over.
